

PROPOSAL - ARTIFICIAL INTELLIGENCE & DATA SCIENCE

Artificial Intelligence Services

A proposal to unlock measurable value from your data

The Opportunity

Modern organisations generate more data than ever, yet most of it stays unused. AI Boutique helps companies turn that data into measurable business value through practical, production-grade machine learning, automation and analytics.

Why this matters

Every week an AI initiative is delayed, its expected value erodes. We design for delivery from day one: small measurable steps, clear ownership, and models that are actually deployed — not just demonstrated.

Highlights at a glance

- ▶ A clear, staged roadmap that maps directly to your business priorities.
- ▶ A senior, cross-functional team of data scientists and ML engineers.
- ▶ Transparent reporting and full knowledge transfer to your team.
- ▶ Flexible engagement: scoped projects or a continuous partnership.

About AI Boutique

AI Boutique is a specialist consultancy focused on the design and delivery of artificial intelligence solutions for businesses of every size. We are a small, senior team — which means you work directly with the people building your solutions, not through a sales layer.

What sets us apart

- ▶ **Senior, hands-on team** — no hand-offs between consulting and delivery.
- ▶ **Business-first design** — every solution is tied to a measurable KPI.
- ▶ **Production focus** — models that run in your environment, not demos.
- ▶ **Knowledge transfer** — your team learns to own and evolve the solution.

Our principles

Transparency

Clear reporting at every stage, focused on business outcomes.

Experience

A track record of successful projects across industries.

Partnership

Close collaboration with your teams and continuous skill transfer.

What We Offer

We structure our work around three core service lines, each designed to create value in a different phase of your AI journey.

Service lines

AI Strategy Consulting

Assess organisational readiness, identify high-value opportunities and build a realistic AI roadmap.

Machine Learning Development

Design, train, evaluate and deploy predictive and optimisation models on your data.

Automation & Optimisation

Automate processes and cut operational costs by combining AI with data analytics.

What every engagement includes

- ▶ A kick-off workshop to align on goals and define success metrics.
- ▶ A data assessment and feasibility check before any model work.
- ▶ Iterative delivery with working software at the end of every sprint.
- ▶ Deployment, monitoring and a hand-over package with documentation.

How We Work

Our methodology is built for speed and certainty. Every project follows four phases, and each phase ends with a tangible checkpoint.

The four phases

1. Discover

Understand your goals, data and constraints; define the success metrics.

2. Design

Architect the solution and prepare the data pipeline.

3. Build

Develop, train and rigorously evaluate the model.

4. Deliver

Deploy, monitor and improve continuously with your team.

Why our approach works

- ▶ **Short cycles** — a working result in weeks, not quarters.
- ▶ **Deployment first** — the target environment shapes the design.
- ▶ **Measured impact** — every phase closes against agreed KPIs.

What You Get

The exact plan is confirmed during the kick-off workshop. As an indication, a typical twelve-week engagement looks like this.

Indicative timeline

Phase	Activities	Deliverables
Weeks 1–2	<i>Discovery</i> — goals, data audit, feasibility	Roadmap and success metrics
Weeks 3–5	<i>Design</i> — architecture, data pipeline	Technical design document
Weeks 6–10	<i>Build</i> — model development and evaluation	Working model and test report
Weeks 11–12	<i>Deliver</i> — deployment, monitoring, hand-over	Deployed solution and documentation

Deliverables summary

- ▶ An AI roadmap aligned with your business goals.
- ▶ Production-grade models with full documentation.
- ▶ Monitoring dashboards and retraining procedures.
- ▶ Training sessions so your team can run and evolve the system.

Who You Will Work With

Every engagement is delivered by a small senior team. You always know exactly who is doing the work and how to reach them.

Core team

Data Scientist

Senior expertise in machine learning, forecasting and natural language processing.

ML Engineer

Production systems, MLOps, cloud infrastructure and model deployment.

AI Strategist

Business analysis, opportunity mapping and programme design.

Working style

- ▶ Weekly demos so you always see real progress.
- ▶ A shared workspace with your team for full visibility.
- ▶ Documentation and code reviews as a core practice.

Engagement Models

We keep our engagement models simple and transparent. The right model depends on your goals and how you prefer to work with us.

Engagement models

Model	Best for	Billing
Scoped project	Fixed deliverables and fixed budget	Fixed price, milestone-based
Team extension	Ongoing capability inside your team	Monthly, per engineer
Advisory retainer	Continuous AI guidance	Monthly retainer

What is always included

- ▶ Kick-off workshop and success-metric definition.
- ▶ Data feasibility assessment.
- ▶ Deployment support and a training session.
- ▶ Post-delivery support window.

Let's Talk

The best next step is a conversation. We will listen to your challenges, ask the right questions, and come back with a concrete plan.
